

# How Does Automox Work Behind the Scenes?

Last Modified on 10/11/2020 9:00 pm EDT

You can think of Automox as a powerful policy-based engine that is constantly evaluating the state of a client or server and checking that state against a predefined policy. If the device or server is found to be out of compliance with a policy, Automox will execute a remediation action that will bring the client or server back into compliance. Learn more on our [How It Works](#) page.
