

# How Do I Bulk Deploy the Automox Agent?

How to deploy the agent to multiple devices at once.

Automox provides scripts and documentation for doing remote, bulk deployment of the Automox agent. For details, see our [Agent deployment documentation](#).

You will find operating-system specific deployment scripts available for Mac, Windows, and Linux, and can be used with a number of deployment applications including Windows Group Policy. This also includes scripts and supporting documentation to deploy Automox with Ansible and JumpCloud with more options on the way including Puppet and Chef.
