

# Week in Review - Release Notes for Week Ending 5/7/2020

Last Modified on 12/18/2020 8:54 pm EST

Minor bug fixes and enhancements. New third party title support for Snagit.

## Bug Fixes:

- Fixes a problem where Internet Explorer was being directed to /undefined/ in the URL
- Added validation on "Maximum Number of Attempts" lockout field to ensure a reasonable value is provided
- Fixed an error that was causing invalid logical operators on Camtasia for Windows 7
- Resolved a bug that was causing timeouts and extended response times on the Devices Page when scanning a large number of devices.

## Enhancements:

- Added color theming for date-pickers in the app. Date-pickers are now dark/light in accordance with parent page themes
  - Added expiration headers to improve caching performance
  - Changed label in advanced policies so as to not lead users to think we had access to apple app store
  - Page no longer loads before login page is displayed when user is not authenticated
  - New third party title patching support for Snagit 2018, Snagit 2019, and Snagit 2020 on macOS and Windows
-
