

Naming Scheme for Third-Party Software Packages

Automox uses an internal naming scheme for supported third-party software packages. The package names are cached and used when configuring [Required Software Policies](#).

When creating a Required Software Policy, the display name and the internally cached name for third-party software packages differ. To ensure that the policy runs correctly, use the cached name in the Package Name field.

Software Title	Cached Package Name
7-Zip	7-Zip
Adobe Acrobat Pro DC	adobe_acrobat_dc_update
Adobe Acrobat Reader DC	adobe_acrobat_reader_dc_full
Adobe Air	adobe_air
Adobe Reader	<i>not cached</i>
