Release Notes For Week Ending 05/07/2021

Enhancements

- Added primary navigation to the top of the user interface. This provides more screen real estate and also sets the stage for future changes to account and profile management. Sub-navigation drop-downs can now be accessed from the primary navigation. See this blog post for more details. Information about the new "Manage" tab can be found here. (5/4)

- Added more updates to the API Reference Guide. Bookmark this page to be able to see what's getting updated. (5/4)

- Reboot deferral duration can now be set in the UI. Also, automatic deferrals for reboots can now be enabled. See https://support.automox.com/help/end-user-notifications and https://support.automox.com/help/using-reboot-notifications to learn more.
